

FPF awareness/memory strategy survey (Qualtrics)

Author note: The survey was always administered after participants completed all task procedures. Note that there were minor wording adjustments between each experiment.

[Instructions]

Next, we will ask you some questions about your experience in the memory study.
We are interested in how people utilize contextual information for memory decisions.

In this survey, we will ask you to think about your own decisions and decision strategies when you were conducting the task. Your answer will not impact your payment or participant status in any way, so please answer truthfully.

1. Did you factor in the "75% old items"/"75% new items" cues when making "old"/"new" memory judgments?
In other words, did knowing the likelihood affect how you make decisions?
 - ☐ No, the percentages did not influence my answers at all
 - ☐ Yes, sometimes
 - ☐ Yes, all the time
2. Did you factor in the "correct"/"wrong" feedback when making subsequent "old"/"new" memory judgments?
In other words, did receiving a "correct" or "wrong" feedback affect how you make subsequent decisions?
 - ☐ No, the feedback did not influence my answers at all
 - ☐ Yes, sometimes
 - ☐ Yes, throughout the entire study
3. Did you notice anything unusual, inaccurate, or misleading about the **"75%/25% old/new" percentage cues** that you received during memory tests?
 - ☐ Yes (please elaborate)
 - ☐ No
 - ☐ I'm not sure
 - ☐ I did not pay attention to the % cues
4. Did you notice anything unusual, inaccurate, or misleading about the **"correct"/"wrong" feedback** that you received during memory tests?
 - ☐ Yes (please elaborate)
 - ☐ No
 - ☐ I'm not sure
 - ☐ I did not pay attention to the feedback
5. Consider all "correct"/"wrong" feedback that you received. From the statements below, please select the one that you agree with.
 - ☐ I believe that all of the feedback I received throughout this study were accurate (true to my expectations).
 - ☐ I believe that some of the feedback I received were inaccurate or misleading.
 - ☐ I believe that most of the feedback I received were inaccurate or misleading.
 - ☐ I believe that all of the feedback I received were inaccurate or misleading.

- I don't know / did not pay attention to whether the feedback were accurate or inaccurate.
 - None of the above (please explain)
6. In the following statements, select all that apply.
- ☐ The feedback was sometimes inaccurate when I correctly answered "old". This means: there were times where I answered "old" and was confident that I answered correctly, but the feedback told me I was wrong.
 - ☐ The feedback was sometimes inaccurate when I correctly answered "new". There were times where I answered "old" and was confident that I answered correctly, but the feedback told me I was wrong.
 - ☐ The feedback was sometimes inaccurate when I INCORRECTLY answered "old". There were times where I answered "old" and was confident that I made a mistake (pressed the wrong key by accident, changed my mind, etc.), but the feedback told me I was correct.
 - ☐ The feedback was sometimes inaccurate when I INCORRECTLY answered "new". There were times where I answered "new" and was confident that I made a mistake (pressed the wrong key by accident, changed my mind, etc.), but the feedback told me I was correct.
 - ☐ I'm pretty sure that all of the feedback I received were correct.
 - ☐ I'm not sure whether the feedback I received were correct.
7. Did you utilize any strategy or trick to help you memorize the images better? For example, some people may focus on one object or color that stands out from the picture, some try to associate each picture with a word, and some find it easier to take in the whole picture as is. If you used any mnemonic tricks of your own, please elaborate below.
8. Did you use any strategy or trick to help you make old/new decisions more easily or more accurately? For example, some people base their old/new decisions solely on their internal sense of familiarity, while some choose to go with whatever the higher "percentage" option is. If you used any specific strategy during your decision making, please elaborate below.
9. During the task, if you were ever unsure ("on the fence") about whether an image was really old or new, do you tend to choose old or new?
- I tend to choose OLD rather than new whenever I'm unsure
 - I tend to choose NEW rather than old whenever I'm unsure
 - I'm equally likely to choose OLD or NEW when I'm unsure (please elaborate)
 - Other (please explain)
 - I do not recall what my response tendencies were
10. In this study, we told you that you can earn performance-based bonuses. We also told you that every correct answer counts toward your bonus, and that incorrect answer does not increase or reduce your bonus. Now, we would like you to imagine an alternative scenario in which you cannot earn any additional bonus, or if your bonus amount is the same regardless of your accuracy.

Do you think that the bonus rules you received motivated you to perform the task any differently than if you were in those alternative scenarios? For example, did you pay better attention than you would otherwise? Did you deliberately choose options that would give you a higher bonus? Or it didn't make any difference? Feel free to elaborate below.

We would like to understand how people integrate external information into their decision-making process, and your insight on how this information affect your decision-making would help us tremendously.

11. Should we include your data for this study?

If there is any reason we should exclude your results from the final analysis (e.g., if you did not pay attention during the task, or if you pressed random keys when answering), please state so. Your answer will NOT impact your payment in any way, so please answer truthfully.

- ☐ Yes!
- ☐ No :(
- ☐ Other (please explain)

12. What do you think this study is about? Feel free to take a guess.

13. If you have any additional comments or thoughts about the study, please write them down below.

[End of survey]
